

## Project Profile - New West Sports Medicine

With construction just beginning (start date of December 2008), New West Sports Medicine & Orthopaedic Surgery's new facility will be one to turn heads. This clinic is not only a state of the art medical clinic, but also serves as a visually pleasing and comfortable experience for the patients.

The main floor which will house the five New West physicians, and an army of support staff, will be approximately 15,000 square feet. Areas designed for this space are 24 Exam Rooms, 4 Nurses Stations, Surgery Scheduling, 2 X-Ray Rooms, 2 MRI rooms, administrative offices, and 2 casting rooms.

The basement will be home to three physical therapists and their staff. Design of this space calls for 8 individual treatment rooms, an open treatment area to include a cardio/weight exercise area, therapy pool, patient record storage, kitchenette and break room, and offices and workspace for Physician Assistants and Physical Trainers.

Although the exterior design calls for masonry with metal architectural details, the interior finishes are still being developed. Scheduled completion is set for March 2010.
